

EVAN BARREAU

Los Angeles, CA | evanoctav3@gmail.com
linkedin.com/in/evan-barreau | github.com/evanoctave

EDUCATION

California State University, Fullerton

B.S. Computer Engineering

Fullerton, CA

Expected May 2029

- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Digital Logic Design
- Dean's List (Fall 2025) | 2025 Rod Dedeaux MLBYA Scholarship Recipient | Club Baseball Team Captain

EXPERIENCE

Software Engineer / IT Assistant, Associated Students Inc. (CSUF)

Jan 2026 - Present

- Built and shipped the ASI Digital Package Tracker, a full-stack progressive web app (JavaScript, Node.js, Express, SQLite) used daily by Titan Student Union mailroom staff and since adopted by other CSU campuses.
- Implemented in-browser barcode scanning with carrier detection and automated package lookup, replacing a manual spreadsheet search and cutting average handling time per package by 70%.
- Maintain and debug student- and staff-facing applications and hardware systems, and participate in code reviews to enforce quality and consistency across the team.
- Deploy and maintain internal services across Vultr cloud instances and an on-prem Proxmox virtualization cluster, owning VM/container provisioning, networking, and uptime for ASI web and IT infrastructure.

Athletic Training Assistant, Andre Zumeta Athletics

Jul 2024 - May 2025

- Performed on-site and off-site injury assessments and rehabilitation support for athletes in a fast-paced clinical setting, communicating care plans directly to athletes and coaching staff.

PROJECTS

CSUFsched - TypeScript, React, Node.js (Fastify), PostgreSQL, Docker, GitHub Actions

github.com/evanoctave/CSUFsched

- Built a full-stack class schedule builder for CSUF students as a pnpm monorepo (React/Vite front end, Fastify REST API, PostgreSQL), shipped as a one-command Docker Compose stack.
- Designed a backtracking schedule solver that filters sections against busy blocks and time preferences, prunes the search with fewest-options-first ordering, and ranks the top schedules by RateMyProfessors rating, gaps, and days on campus.
- Wrote a rate-limited scraper that rebuilds the course catalog nightly and refreshes enrollment status hourly via cron; a sanity gate aborts runs when section counts drop, and pruning is skipped on incomplete scrapes.
- Set up GitHub Actions CI that runs typechecks, 250+ unit and integration tests against a PostgreSQL service container, and a Playwright end-to-end smoke test on every pull request.

EvoEat (formerly Plately) - React Native (Expo), TypeScript, TensorFlow Lite, Supabase

github.com/evanoctave/plately

- Built a photo-first iOS nutrition tracker with on-device food recognition: trained a Food-101 MobileNetV2 image classifier in Python (TensorFlow) and exported it to TensorFlow Lite, so meal photos never leave the device.
- Architected a local-first SQLite + Zustand data layer with optional Supabase (PostgreSQL) cloud sync, last-write-wins conflict resolution, and row-level security.
- Added GitHub Actions CI (typechecks, lint, Jest, dependency audit, secret scanning) and tag-triggered EAS iOS builds.

Evolytics - React, TypeScript, Node.js, Express, Zod, Vitest

- Built a full-stack MLB analytics dashboard on the public MLB Stats API: a React front end over a typed Express REST API with Zod validation and in-memory TTL caching, plus a custom 0-100 "Hot/Cold" form score covered by Vitest unit tests.

Rumie - Flutter, Dart, REST API

github.com/evanoctave/rumie-app

- Co-developed a roommate-matching app with a teammate: built the auth flow, Face ID lock screen, and swipe/listings/chat screens, wired them to the FastAPI REST backend, hardened token refresh handling, and added widget tests.

Self-Hosted Infrastructure (evoserver) - Linux, Docker, Cloudflare Tunnels, Tailscale

- Host three production websites for family businesses on a self-managed Linux server, each containerized with Docker and published through Cloudflare Tunnels with zero open inbound ports; manage DNS, TLS, updates, and recovery as sole operator.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++, Swift, Dart, SQL, Bash, HTML/CSS

Frameworks & Libraries: React, Node.js, Express, Fastify, Next.js, React Native (Expo), Flutter, SwiftUI, TensorFlow Lite

Cloud & DevOps: Docker, Docker Compose, GitHub Actions (CI/CD), Linux, Vultr, Proxmox, Cloudflare Tunnels, Tailscale

Databases & Tools: PostgreSQL, SQLite, Supabase, REST APIs, Git, Vitest, Jest, Playwright
